

# THE 3 AI PROMPTS

## Ghost Subie Adventures — Preparedness Without Panic

Steal the trend's mechanic, never its numbers. Run these like a routine, not a one-off.

These are the three prompts behind every data-driven decision on @ghostsubieadventures. Copy each one into ChatGPT (or your AI tool of choice), fill in your own numbers where the brackets are, and run them on the cadence below each prompt. They are written for my niche, but the structure works for any creator.

### 1 PROMPT 1 · COMPETITOR ANALYSIS

```
"You are my social media analyst for my Instagram @ghostsubieadventures (bio: "Preparedness Without Panic, daily-driven Ghost | SATX Explorer / Subaru Overlander, EDC, Fieldcraft"). Find 5-10 creators in my niche: overland Subaru owners, family camping creators, and "preparedness without panic" creators with 2K-50K followers. For each, audit their last 20 reels and report: their 3 best-performing posts with like/comment counts, the repeatable format in each (hook, structure, on-screen text pattern, caption mechanic), and what my account is missing that they do well. Rank creators by engagement relative to follower count."
```

USE IT: Paste into ChatGPT or your AI tool of choice whenever you want a fresh sweep of who's winning in your niche. Ask it to re-run quarterly - the niche moves fast.

### 2 PROMPT 2 · FEED AUDIT

```
"You are auditing my Instagram @ghostsubieadventures (bio: "Preparedness Without Panic, daily-driven Ghost | SATX Explorer / Subaru Overlander, EDC, Fieldcraft"). Here are my last 20 posts: [paste list with captions, like counts, comment counts]. Tell me: (a) which 3 over-performed and WHY - hook, format, timing, topic; (b) which 3 under-performed and WHY; (c) three tactical changes I can make this week - one about hooks, one about format, one about posting cadence. No generic advice. My niche: daily-driven white 2022 Subaru Forester overland rig in Texas, "Preparedness Without Panic," dad + wife + kid + blue heeler, pitching brands for partnerships."
```

USE IT: Run monthly. What worked last month: story/community hooks won ("missing my fuzzy bros" Base Camp post - 121 likes; "raised vs lowered fuzzy" - 112 likes / 16 comments; Bluey origin story - 70). Diary-style captions and Ghost Energy meme posts sat at the bottom (10-36 likes). Repeat the comparison-joke + tags playbook that drove your best comment ratios.

### 3 PROMPT 3 · FORENSIC RETENTION

"You are a short-form retention analyst. Here are my last 30 reels with average watch time and drop-off points: [paste data]. Identify: the 3 biggest retention killers (first-3-second hook, mid-video sag, ending), the timestamp patterns where viewers leave, and what my best-retained video did differently. Give me one fixed opening formula and one fixed closing formula for my next 10 videos."

USE IT: Needs your watch-time data - Meta Business Suite > Insights > Reels > export the last 30 reels (average watch time, drop-off points). Paste the export into the prompt. Run every 1-2 months or after any big content experiment.
